## Fingerprint Home Access System

### *No Keys Required!*

Sequiam Biometrics BioLock is a biometrically accessible door lock system to be applied to external and internal doors for residential and small commercial applications. This is a complete system from the powered deadbolt to the biometric sensor. When a valid finger is detected on the biometric sensor it activates the deadbolt assembly to unlock the door.

The BioLock is a user-friendly biometrically accessible deadbolt door lock system to be applied to external and/or internal doors for residential and small commercial applications. The BioLock is the result of sophisticated engineering by the teams at Sequiam and Black and Decker Weiser Lock. This technology is a revolution in biometric deadbolt locks, from its sleek and subtle design to its operation in a wide range of environments; the BioLock is the new standard. As a complete system, the BioLock offers a powered deadbolt that is activated by swiping a valid fingerprint. The BioLock can be easily installed on most standard doors.

#### *Key Advantages*

- Automatic on feature, just place finger and swipe
- Sleek subtle design
- Powered deadbolt lock
- Up to 50 different users
- Powered by 4 AA batteries
- Battery level indicator
- Two backup keys
- Easy installation
- Fits most standard doors
- No computers or servers required
- Simple 3-step fingerprint enrollment process
- Exterior LED indicator for user-friendly communication
